LEADERSHIP / EFFICIENCY / RESULTS

Executive Summary: My business development, technical and financial background have made me extremely valuable in executive, technical and sales roles. I worked my way through college as a bank teller. Upon graduation I quickly made my way to Sr. Project Manager for GuideStone where I managed Y2K among other critical technology projects. Recruited by Merrill Lynch, I served as a Financial Advisor and technical lead, where I built a CRM system that is still in production today. Bank of America later recruited me as the VP / Investments, where I managed a large book of High Net Worth clientele and a technical department. I started my own investment business in 2007 and my own Web Design firm in 2008. In 2009 a friend recruited me to serve as CIO, CTO and Webmaster for two sister companies, Precision3 and Anres Technologies.

I have a BBA in Finance from the University of Texas. My wife and I are active at our church, Prestonwood, where I play percussion in the band on weekends. We home-school our six children. I believe in leading by example, my teams love me and organizations love the incredible speed and quality output my departments deliver.

Sales Success and Leadership: I've closed multi-million dollar deals and set sales records calling on some of Dallas' wealthiest and influential families and businesses. I've closed high level deals and developed sales training in Investments, Health Care, Consulting, Technology, and Banking. I'm a proven sales leader, sales trainer, and sales team builder with years of experience closing the sale.

Project Manager, Webmaster, and Technology Executive: As a kid out of school I was managing Y2K for a multi-billion dollar pension plan. I've developed, managed complete system overhauls, CRM development, IVR, Website Design, ERP, Data Center Design, POS, Platform Overhaul, Disaster Recovery, PCI Compliance, virtually every technical task in Financial Service, Health Care, and Retail. As CTO, I've built some amazing and talented teams.

Strategic Developer and Process Architect: As a small business executive you wear many hats. My financial advice background has formed an incredibly good vision for guiding direction and strategy with the leadership to execute effectively. My peers describe me as Efficient, Effective, Somebody who gets things done, intelligent, insightful, and having a great business mind. Nobody outworks me and no project or task to date has ever outsmarted me.

SELECTED ACHIEVEMENTS & SKILLS

- Built a Network Marketing Organization running over \$400k revenue per month in only 6 months
- Orchestrated the turnaround of a loss-leading investment division, to the largest investment business in the US
- Managed Y2K, System Overhauls, and Website Designs just out of college for an \$8billion pension fund
- Developed a phenomenal Stored Value Debit Card platform in two weeks that has over a million users per day
- Closed and Managed over \$380million in assets for the largest investment firm in the country (Merrill / BofA)
- Managed IPOs, Private Placements, Leveraged Buyouts, and MBOs. I'm no stranger to the board room.
